Research in Barcelona at a glance

With a population of 1.6 million in the city itself and a further 4 million in the suburbs, Barcelona is the second largest city in Spain, and probably the most cosmopolitan and most exciting. There are two official languages in Barcelona: Catalan and Spanish.

From a scientific point of view, Barcelona and its surroundings constitute the principal and most prominent biocluster in the Southern European Bioregion. The BioRegion of Catalonia is the cluster for biotechnology, biomedicine and medical technology in Catalonia. It is made up of 520 companies, 440 research groups and 54 research centres, 10 universities which offer life sciences studies, and 15 hospitals with noteworthy research activity. It also includes innovation and technology-transfer support structures and networks. The organisation Biocat boosts and promotes the cluster. The city also hosts a wide range of cutting-edge technological platforms and scientific core facilities, including ALBA, a new synchrotron light facility, and the Barcelona Supercomputing Center, home to the MareNostrum supercomputer.

The Centre for Genomic Regulation (CRG) is part of Barcelona Biomedical Research Park (PRBB), one of the scientific parks in the city, which is physically connected to the Hospital del Mar. The PRBB groups together different institutions, including the Department of Medicine and Life Sciences of Pompeu Fabra University, the Hospital del Mar Medical Research Institute, the Barcelona Institute for Global Health, the Institute of Evolutionary Biology, and the EMBL Barcelona site, creating a critical mass of biomedical research.

[Research in Barcelona](#)

Centre for Genomic Regulation

The Centre for Genomic Regulation (CRG) is an international biomedical research institute of excellence, created in December 2000. It is a non-profit foundation funded by the Catalan Government through the Departments of Economy & Knowledge and Health, the Spanish Ministry of Economy, Industry and Competitiveness, the "la Caixa" Foundation, and includes the participation of Pompeu Fabra University.

The mission of the CRG is to discover and advance knowledge for the benefit of society, public health and economic prosperity. The CRG believes that the medicine of the future depends on the ground-breaking science of today. This requires an interdisciplinary scientific team focused on understanding the complexity of life from the genome to the cell to a whole organism and its interaction with the environment, offering an integrated view of genetic diseases.

The CRG is a unique centre in Spain, based in an innovative organisation research model. Group leaders at the CRG are recruited internationally and receive support from the centre to set up and run their groups. An external evaluation panel, made up of renowned leaders in the different areas, evaluates them. The result of evaluations conditions the future of the CRG scientists, no matter whether they have open-ended or time-limited contracts. This ensures the mobility and the renewal of the workforce.

Planning Accommodation

CRG does not have on-site halls of residence or dormitories and Barcelona has a range of prices and housing options available throughout the city. Though there are many ways to find an apartment on your own, often it is more efficient to work with an agency. We provide some suggestions of links that can be useful for apartment search and housing and students residences.
